#### RANGE EXTENSION FOR TWO INTRODUCED DUNG BEETLES (COLEOPTERA: SCARABAEIDAE)

On April 25, and on May 16, 1964, at Lynden, Washington, I collected in dung a total of twenty *Aphodius fossor* L. and three *Onthophagus nuchicornis* (L.), so determined by Dr. Melville H. Hatch. Several *A. fossor* were likewise taken by Mr. David Milne at Anderson Island, Washington, on April 24, 1964. These are the first records for these European species in Washington, but they have been taken at Creston, B. C. and in Idaho.—LOREN RUSSELL, Zoology Division, University of Washington, Seattle, Washington.
